RE: Multimedia Designer

Dear Hiring Manager,

Being a graduate of the Interactive Multimedia and Design program at Carleton University in Collaboration with Algonquin College. I am well versed and have experience in what I can only describe as any type of design that takes place on a Graphic User Interface. This includes Graphic Design, Programming, Front End Development, UI UX Design/ Development, 3D Modelling/ Animation, Game Development, Video Editing, VFX and an in depth understanding of Human and Computer Interaction.

I have what I can only describe as an intense passion for the world of design, and I have paired this passion with a deep understanding of the human mind as I have a big interest in Psychology. These two skills combined give me the ability to come up with suitable designs for any target audience. Through ought my tenure in my Undergraduate degree I have worked on several project and the feedback I have gotten from my peers that I have worked with about my work ethic is my willingness to take criticism and adjust my work no matter how many times it takes or how many hours it might take in order to always come up with designs that are most suitable to the target audience. What I would argue is my greatest quality is my willingness and enthusiasm to learn new things and collaborate with others in a team project.

For a greater presentation of my background and qualifications, please review my website <http://shajodigital.com/>. It would be a pleasure to continue my passion and grow in my profession alongside your company. Thank you for your consideration.

Yours Sincerely,

Tito Orunesajo
